

Name: _____

We are cutting the corners from a 12 cm x 12 cm metal sheet to form a box with no top. Find the height of the box that maximizes the box's volume.

$$\text{Maximize } V = (12 - 2x)^2 x$$

$$\begin{aligned} V' &= (12 - 2x)^2 (1) + x [2(12 - 2x)(-2)] \\ &= (12 - 2x)(12 - 2x - 4x) \\ &= (12 - 2x)(12 - 6x) \end{aligned}$$

$$\text{Set } V' = 0 : \quad (12 - 2x)(12 - 6x) = 0$$

↓	↓
$x = 6$	$x = 2$
REL MIN	REL MAX
(Volume = 0)	

$x = 2 \text{ cm}$

Alternatively :

$$\begin{aligned} V &= (12 - 2x)^2 x \\ &= (144 - 48x + 4x^2)x \\ &= 144x - 48x^2 + 4x^3 \end{aligned}$$

$$V' = 144 - 96x + 12x^2 \rightarrow$$

$$V' = 144 - 96x + 12x^2$$

$$\text{Set } V' = 0: \quad 144 - 96x + 12x^2 = 0$$

$$12 - 8x + x^2 = 0$$

$$(x - 6)(x - 2) = 0$$

$$\swarrow$$
$$x = 6$$
