

Definition: The **standard matrix for** T is the matrix that performs T . It's written $[T]$.

Fact: Let $T : \mathbb{R}^2 \rightarrow \mathbb{R}^m$ be a linear transformation. To calculate $[T]$:

Place $T\left(\begin{bmatrix} 1 \\ 0 \end{bmatrix}\right)$ in the first column and place $T\left(\begin{bmatrix} 0 \\ 1 \end{bmatrix}\right)$ in the second column.

In other words, $[T] = \left[T\left(\begin{bmatrix} 1 \\ 0 \end{bmatrix}\right) \mid T\left(\begin{bmatrix} 0 \\ 1 \end{bmatrix}\right) \right]$.

Fact: Let $T : \mathbb{R}^n \rightarrow \mathbb{R}^m$ be a linear transformation. Then:

$$[T] = \left[T\left(\begin{bmatrix} 1 \\ 0 \\ \vdots \\ 0 \end{bmatrix}\right) \mid T\left(\begin{bmatrix} 0 \\ 1 \\ 0 \\ \vdots \\ 0 \end{bmatrix}\right) \mid \dots \mid T\left(\begin{bmatrix} 0 \\ 0 \\ \vdots \\ 1 \end{bmatrix}\right) \right].$$

Handwritten: $T(\vec{u} + \vec{v}) = T(\vec{u}) + T(\vec{v})$
 and
 $T(c\vec{u}) = cT(\vec{u})$

Comment: The formula for $[T]$ works because T is linear.

$$\begin{aligned} & T\left(\begin{bmatrix} x \\ y \end{bmatrix}\right) \\ &= T\left(x\begin{bmatrix} 1 \\ 0 \end{bmatrix} + y\begin{bmatrix} 0 \\ 1 \end{bmatrix}\right) \\ &= T\left(x\begin{bmatrix} 1 \\ 0 \end{bmatrix}\right) + T\left(y\begin{bmatrix} 0 \\ 1 \end{bmatrix}\right) \\ &= xT\left(\begin{bmatrix} 1 \\ 0 \end{bmatrix}\right) + yT\left(\begin{bmatrix} 0 \\ 1 \end{bmatrix}\right) \\ &= \underbrace{\begin{bmatrix} T\left(\begin{bmatrix} 1 \\ 0 \end{bmatrix}\right) & T\left(\begin{bmatrix} 0 \\ 1 \end{bmatrix}\right) \end{bmatrix}}_{\text{standard matrix for } T} \begin{bmatrix} x \\ y \end{bmatrix} \end{aligned}$$

Example: Let $T : \mathbb{R}^2 \rightarrow \mathbb{R}^2$ be the transformation that reflects a vector in the y -axis.
Find:

a) $[T]$

$$T\left(\begin{bmatrix} 1 \\ 0 \end{bmatrix}\right) = \begin{bmatrix} -1 \\ 0 \end{bmatrix}$$

$$T\left(\begin{bmatrix} 0 \\ 1 \end{bmatrix}\right) = \begin{bmatrix} 0 \\ 1 \end{bmatrix}$$

$$[T] = \begin{bmatrix} -1 & 0 \\ 0 & 1 \end{bmatrix}$$

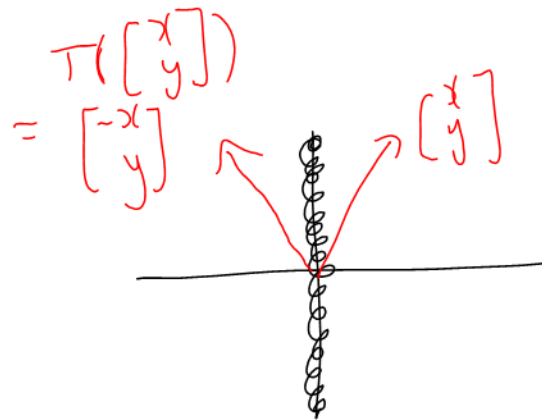

b) $T\left(\begin{bmatrix} x \\ y \end{bmatrix}\right)$

$$= [T] \begin{bmatrix} x \\ y \end{bmatrix}$$

$$= \begin{bmatrix} -1 & 0 \\ 0 & 1 \end{bmatrix} \begin{bmatrix} x \\ y \end{bmatrix}$$

$$= \begin{bmatrix} -x \\ y \end{bmatrix}$$

Example: Let $T : \mathbb{R}^2 \rightarrow \mathbb{R}^2$ be the transformation that reflects a vector in the line $y = x$.
Find $[T]$.

$$T\left(\begin{bmatrix} 1 \\ 0 \end{bmatrix}\right) = \begin{bmatrix} 0 \\ 1 \end{bmatrix}$$

$$T\left(\begin{bmatrix} 0 \\ 1 \end{bmatrix}\right) = \begin{bmatrix} 1 \\ 0 \end{bmatrix}$$

$$[T] = \begin{bmatrix} 0 & 1 \\ 1 & 0 \end{bmatrix}$$

3.6 Linear Transformations

Example: Let $T: \mathbb{R}^2 \rightarrow \mathbb{R}^2$ be the transformation that rotates a vector by angle θ (counterclockwise). Find $[T]$.

$$T\left(\begin{bmatrix} 1 \\ 0 \end{bmatrix}\right) = \begin{bmatrix} \cos\theta \\ \sin\theta \end{bmatrix}$$

$$T\left(\begin{bmatrix} 0 \\ 1 \end{bmatrix}\right) = \begin{bmatrix} -\sin\theta \\ \cos\theta \end{bmatrix}$$

$$[T] = \begin{bmatrix} \cos\theta & -\sin\theta \\ \sin\theta & \cos\theta \end{bmatrix}$$

⊗ know this

Example: Rotate $\begin{bmatrix} 1 \\ 1 \end{bmatrix}$ by 30° clockwise.

$$\begin{bmatrix} \cos\theta & -\sin\theta \\ \sin\theta & \cos\theta \end{bmatrix}_{\theta = -30^\circ} \begin{bmatrix} 1 \\ 1 \end{bmatrix}$$

$$= \frac{1}{2} \begin{bmatrix} \sqrt{3} & 1 \\ -1 & \sqrt{3} \end{bmatrix} \begin{bmatrix} 1 \\ 1 \end{bmatrix}$$

$$= \frac{1}{2} \begin{bmatrix} \sqrt{3} + 1 \\ -1 + \sqrt{3} \end{bmatrix}$$

S	A
T	c

$\cos(-30^\circ) = +\frac{\sqrt{3}}{2}$
 $\sin(-30^\circ) = -\frac{1}{2}$

Example: Let $T: \mathbb{R}^2 \rightarrow \mathbb{R}^2$ be the transformation that projects a vector on the line l through the origin with direction vector $\vec{d} = \begin{bmatrix} a \\ b \end{bmatrix}$. Find $[T]$.

$$\begin{aligned} T\left(\begin{bmatrix} 1 \\ 0 \end{bmatrix}\right) &= \text{proj}_{\begin{bmatrix} a \\ b \end{bmatrix}} \begin{bmatrix} 1 \\ 0 \end{bmatrix} \\ &= \frac{\begin{bmatrix} a \\ b \end{bmatrix} \cdot \begin{bmatrix} 1 \\ 0 \end{bmatrix}}{\|\begin{bmatrix} a \\ b \end{bmatrix}\|^2} \begin{bmatrix} a \\ b \end{bmatrix} \\ &= \frac{a}{a^2+b^2} \begin{bmatrix} a \\ b \end{bmatrix} \\ &= \frac{1}{a^2+b^2} \begin{bmatrix} a^2 \\ ab \end{bmatrix} \end{aligned}$$

$$\begin{aligned} T\left(\begin{bmatrix} 0 \\ 1 \end{bmatrix}\right) &= \text{proj}_{\begin{bmatrix} a \\ b \end{bmatrix}} \begin{bmatrix} 0 \\ 1 \end{bmatrix} \\ &= \frac{b}{a^2+b^2} \begin{bmatrix} a \\ b \end{bmatrix} \\ &= \frac{1}{a^2+b^2} \begin{bmatrix} ab \\ b^2 \end{bmatrix} \end{aligned}$$

$$[T] = \frac{1}{a^2+b^2} \begin{bmatrix} a^2 & ab \\ ab & b^2 \end{bmatrix} \quad \otimes \text{ Know this}$$

Comment: It's recommended that you know the following two standard matrices:

Rotation by angle θ (counterclockwise): $[T] = \begin{bmatrix} \cos \theta & -\sin \theta \\ \sin \theta & \cos \theta \end{bmatrix}$

Projection onto the line $\vec{x} = t \begin{bmatrix} a \\ b \end{bmatrix}$: $[T] = \frac{1}{a^2+b^2} \begin{bmatrix} a^2 & ab \\ ab & b^2 \end{bmatrix}$
